## **Custom Air Products & Services among Finalists for Safety Award**

Houston, TX (February 19, 2013) — Custom Air Products & Services (CAPS), a leading commercial and industrial heating, ventilation, and air conditioning (HVAC) company, today announced it has been named a finalist in the Houston Business Roundtable (HBR) Safety Excellence Award. Custom Air Products & Services was nominated for this award by DuPont LaPorte.

The HBR Safety Excellence Award process is a six-month long effort that begins with nomination by one of HBR's client companies. Each nominee submits the required Occupational Safety and Health Administration (OSHA) safety data, copies of policies and procedures related to safe operations, as well as evidences of their best practices. Safety audits are then conducted in the field to ensure documented safety processes are implemented in daily work activities.

Since 1988 the HBR has been recognizing contractors for their outstanding safety performance. The organization believes that the Greater Houston Area contractors involved in this award process have developed world class safety programs and have significantly better safety records than any other group of contractors in the world.

Taylor Norris, CEO of Custom Air Products & Services, said, "We are very proud to once again be nominated for this honor. We fully support safety initiatives like this, especially those that partner companies like ours with our client companies in establishing and improving safety processes in the workplace. We are pleased to once again be participating in this activity that rewards our focus on workplace safety."

### **About Custom Air Products & Services**

Custom Air Products & Services, Inc. is a full-service HVAC company that specializes in the design, construction, installation, modification, and servicing of industrial and commercial air conditioning equipment. CAPS employees are committed to providing exceptional custom design and quality workmanship at competitive prices.

## PRESS RELEASE

Custom Air Products & Services currently occupies four modern facilities, totaling 150,000 square feet in size. These buildings include administrative and engineering offices, training facilities, a filter warehouse, and service shops for fabrication, manufacturing, and modifications. CAPS services are provided to customers throughout the United States and Mexico while their manufactured products have been delivered to sites around the world.
