## **Custom Air Products & Services to participate in Sam Houston State University Agricultural and Industrial Science Career Fair**

Houston, TX (January 30, 2013) — Custom Air Products & Services (CAPS), a leading commercial and industrial heating, ventilation, and air conditioning (HVAC) company, today announced it will be participating in the Sam Houston State University Agricultural and Industrial Science Career Fair on February 7.

The Department of Agricultural and Industrial Sciences has over 1,100 students majoring in agricultural business and engineering technologies as well as Industrial Technology, Construction Science, and Industrial Management.

The event, scheduled for 10 AM to 2 PM on February 7, provides CAPS with an opportunity to meet with SHSU's pool of candidates, interact with prospective employees, review their resumes, schedule follow-up interviews, and distribute information about the company and its future needs.

Taylor Norris, CEO of Custom Air Products & Services, said, "This is our first year to be participating in the Agricultural and Industrial Career Science Fair. While a big emphasis at the fair appears to be for students in agricultural fields, we are hoping to see those from the industrial technology fields as well. We are seeking candidates who are hardworking, innovative, and technically skilled to be contributing members in our organization and who have the potential to contribute to our efforts toward meeting our customers' needs."

### **About Custom Air Products & Services**

Custom Air Products & Services, Inc. is a full-service HVAC company that specializes in the design, construction, installation, modification, and servicing of industrial and commercial air conditioning equipment. CAPS employees are committed to providing exceptional custom design and quality workmanship at competitive prices.

Custom Air Products & Services currently occupies four modern facilities, totaling 150,000 square feet in size. These buildings include administrative and engineering offices, training facilities, a filter warehouse, and service shops for fabrication, manufacturing, and
